

# Shared Objects and Mutual Exclusion

Alexandre David

1. Try the GARDEN example model while commenting the TEST process and exhibit that the model is wrong. Check that the model behaves correctly with the TEST process. The TEST process is not supposed to have any impact on the original model, thus there is a mistake in the original model, but it is still OK to check for our race condition.
2. Try the fixed GARDEN example model and replay what I showed during the lecture.
3. Exercise 4.2.
4. Draw the structure diagram of exercise 4.3.
5. Exercise 4.3.
