## Semantics and Verification 2005

## Lecture 5

- Hennessy-Milner logic
- syntax and semantics
- correspondence with strong bisimilarity
- examples in CWB

Lecture 5 () Semantics and Verification 2005

# Logical Properties of Reactive Systems

Modal Properties - what can happen **now** (possibility, necessity)

- drink a coffee (can drink a coffee now)
- does not drink tea
- drinks both tea and coffee
- drinks tea after coffee

## Temporal Properties – behaviour in time

- never drinks any alcohol
- (safety property: nothing bad can happen)
- eventually will have a glass of wine

(liveness property: something good will happen)

Can these properties be expressed using equivalence checking?

# Verifying Correctness of Reactive Systems

Let Impl be an implementation of a system (e.g. in CCS syntax).

Equivalence Checking Approach

$$Impl \equiv Spec$$

- ullet is an abstract equivalence, e.g.  $\sim$  or pprox
- Spec is often expressed in the same language as Impl
- Spec provides the full specification of the intended behaviour

## Model Checking Approach

$$Impl \models Property$$

- |= is the satisfaction relation
- Property is a particular feature, often expressed via a logic
- Property is a partial specification of the intended behaviour

# Hennessy-Milner Logic - Syntax

Syntax of the Formulae ( $a \in Act$ )

$$F,G ::= tt \mid ff \mid F \wedge G \mid F \vee G \mid \langle a \rangle F \mid [a]F$$

### Intuition:

1 / 12

- tt all processes satisfy this property
- ff no process satisfies this property
- $\land$ ,  $\lor$  usual logical AND and OR
- $\langle a \rangle F$  there is at least one a-successor that satisfies F
- [a]F all a-successors have to satisfy F

## Remark

Temporal properties like *always/never in the future* or *eventually* are not included.

Model Checking of Reactive Systems

# Hennessy-Milner Logic – Semantics

Let  $(Proc, Act, \{\stackrel{a}{\longrightarrow} | a \in Act\})$  be an LTS.

Validity of the logical triple  $p \models F \ (p \in Proc, F \text{ a HM formula})$ 

Develop a logic in which we can express interesting properties of reactive

 $p \models tt \text{ for each } p \in Proc$ 

 $p \models f f$  for no p (we also write  $p \not\models f f$ )

 $p \models F \land G$  iff  $p \models F$  and  $p \models G$ 

 $p \models F \lor G$  iff  $p \models F$  or  $p \models G$ 

 $p \models \langle a \rangle F$  iff  $p \stackrel{a}{\longrightarrow} p'$  for some  $p' \in \mathit{Proc}$  such that  $p' \models F$ 

 $p \models [a]F$  iff  $p' \models F$ , for all  $p' \in Proc$  such that  $p \xrightarrow{a} p'$ 

We write  $p \not\models F$  whenever p does not satisfy F.

# What about Negation?

For every formula F we define the formula  $F^c$  as follows:

$$tt^c = ff$$

• 
$$ff^c = tt$$

• 
$$(F \wedge G)^c = F^c \vee G^c$$

$$(F \vee G)^c = F^c \wedge G^c$$

$$(\langle a \rangle F)^c = [a]F^c$$

• 
$$([a]F)^c = \langle a \rangle F^c$$

Theorem ( $F^c$  is equivalent to the negation of F)

For any  $p \in Proc$  and any HM formula F

① 
$$p \models F \Longrightarrow p \not\models F^c$$

# Image-Finite Labelled Transition System

## Image-Finite System

Let  $(Proc, Act, \{\stackrel{a}{\longrightarrow} | a \in Act\})$  be an LTS. We call it **image-finite** iff for every  $p \in Proc$  and every  $a \in Act$  the set

$$\{p' \in Proc \mid p \stackrel{a}{\longrightarrow} p'\}$$

is finite.

# Hennessy-Milner Logic – Denotational Semantics

For a formula F let  $\llbracket F \rrbracket \subseteq Proc$  contain all states that satisfy F.

Denotational Semantics:  $\llbracket \_ \rrbracket$ : Formulae  $\rightarrow 2^{Proc}$ 

• 
$$[F \lor G] = [F] \cup [G]$$

• 
$$[\![F \land G]\!] = [\![F]\!] \cap [\![G]\!]$$

• 
$$[[a]F] = [\cdot a \cdot][F]$$

where  $\langle \cdot a \cdot \rangle, [\cdot a \cdot] : 2^{(Proc)} \rightarrow 2^{(Proc)}$  are defined by

$$\langle \cdot a \cdot \rangle S = \{ p \in Proc \mid \exists p'. \ p \stackrel{a}{\longrightarrow} p' \text{ and } p' \in S \}$$

$$[\cdot a \cdot] S = \{ p \in Proc \mid \forall p'. \ p \xrightarrow{a} p' \implies p' \in S \}.$$

# Relationship between HM Logic and Strong Bisimilarity

## Theorem (Hennessy-Milner)

Let  $(Proc, Act, \{\stackrel{a}{\longrightarrow} | \ a \in Act\})$  be an image-finite LTS and  $p, q \in St$ . Then

$$p \sim q$$

if and only if

for every HM formula  $F: (p \models F \iff q \models F)$ .

# The Correspondence Theorem

## Theorem

Let  $(Proc, Act, \{\stackrel{a}{\longrightarrow} | a \in Act\})$  be an LTS,  $p \in Proc$  and F a formula of Hennessy-Milner logic. Then

```
p \models F if and only if p \in \llbracket F \rrbracket.
```

ntics and Verification 2005

Proof: by structural induction on the structure of the formula F.
